

BEVERAGE BREWING DEVICE**ABSTRACT**

A beverage brewing device for brewing hot beverages such as coffee,
15 tea, roasted-barley coffee, camomile tea and similar infusions. The
brewing device includes a brewing chamber in which the substances
needed to prepare the infusion are introduced through a mixing hopper,
which is situated above the brewing chamber, and are mixed by
compressed air being admitted thereinto. The device further includes a
20 removable filter that closes the brewing chamber on the lower side
thereof. The opening connecting the mixing hopper) with the brewing
chamber is closed by an automatic valve, which is actuated by the
compressed air supplied via a delivery conduit.
